

Ge ACOUSTO-OPTIC MODULATOR

Germanium AOM for High-Power, 5.5 μ m Applications

I-M0XX-XC11B76-P5-GH105

An acousto-optic modulator for use at 5.5 μ m wavelength, ideal for extra-cavity modulation or power control of high power CO lasers.

Combining optimum grade mono-crystalline germanium, high quality optical finishing, robust anti-reflection (AR) coating and high reliability transducer bonding, with novel acoustic management and opto-mechanical design techniques, we have successfully achieved exceptional thermal management whilst maintaining high RF power handling, transmission and diffraction efficiency.

In addition to the specifications indicated, we also offer alternative wavelengths, RF frequencies, active apertures and a wide range of custom housing configurations.

This product conforms to the requirements of the European Union Directive 2011/65/EU of the European Parliament and of the Council on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment.

Our scientists and engineers are available to assist in selecting the most appropriate acousto-optic device and RF driver for your application.
