The DR-DG-28-MO is a driver module optimized for digital applications at 28 Gbps – 32 Gbps data rate. It exhibits an output voltage of 6 V_{pp} and a broad bandwidth of 28 GHz.

The DR-DG-28-MO is housed in a compact package that integrates voltage regulators allowing for flexible biasing, while internal bias sequencing circuitry assures robust operation and single voltage power supply for maximum ease of use. It features two control inputs: one for gain control, the second one for crossing point adjustment. The RF connectors are K type, allowing easy and repeatable connections.

The DR-DG-28-MO combines high performance and user friendliness, it is the ideal device to drive 28 Gbps modulators and to obtain widely opened optical eye diagrams with short jitter and high SNR.

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.
